

Test and Measurement Product Capability

Millimeter wave measurements require a variety of instruments and components for accurate and reliable evaluation or characterization. Millitech offers a range of products to satisfy the test and measurement needs of most customers. These products are fully tested, rigorously characterized and calibrated to ensure the integrity of the customer's measurement subsystem.

In addition to manually operated instruments and components, Millitech also provides several motorized and remotely/computer controlled products for automated measurements. Complete test sets for various measurements are also configured to match requirements. Please check the Standard Products section of the Millitech website to find Product Descriptions and Datasheets for more information.
